No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Biophys. Struct. Mech. 1.139-146(1975).

INSCELLANBOUS: THE STRUCTURE OF THE V REGION WAS DETERMINED BY MOLECTUAR REPLACEMENT METHODS USING THE KNOWN STRUCTURE OF THE V REGION OF THE KAAPA CHAIN REI.

INSCELLANBOUS: THE C REGION OF THIS CHAIN HAS THE INV (3) MARKER.

INSCELLANBOUS: THIS IS A BENCE-JONES PROTEIN.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A Geneseq 101002:*

                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                        원
                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel human antibody (I), preferably a human conclonal antibody which binds to an activation inducible lymphocyte monoclonal antibody which binds to an activation inducible lymphocyte commondulatory molecule (AILIM). (I) is useful for modulating soft proliferation transduction into a cell mediated by AILIM, for modulating proliferation of a transduction into a cell mediated by AILIM, commondulating proliferation of a Cytokine from against AILIM-expressing cells, and for inducing antibody-dependent cytocxcity AILIM-expressing cells and/or immune cytolysis or apptobls of prophylaxis of delayed type allergy. (I) is useful for treating, preventing and continulatory transduction, and for inhibiting the onset and/or prevention and/or treatment of the diseases associated with AILIM-mediated costimulatory transduction, and for inhibiting the onset and/or prevention and/or treatment of the useful for suppression.

Costimulatory transduction, and for inhibiting the onset and/or prevention and/or treatment of the useful for suppression.

Costimulatory transduction, and for inhibiting the onset and/or prevention and/or treatment of the useful for suppression.

Control inflammatory dermacosis, systemic lupus erythematosus, insulin-dependent diabetes mellitus, psoriasis, autoimmune or allergic disease, immune rejection, disorders such as immunity, specifically inflammatory intestinal disorders such as immunity, specifically inflammatory intestinal disorders such as immunity, specifically inflammatory intestinal disorders such as immunity, particulation antiques no serious immunorable antique to antigenicity contact to human, i.e., human anti-mouse antigenicity (HaMA) in a host.

Cacid sequences of the invention.

The invention is based on the discovery of new human immune response proteins (HIRP), the polynucleotides encoding them, and the use of these compositions for the diagnosis, treatment or prevention of immunological and cell proliferative disorders.

The present sequence is that of human immune response protein 1 (HIRP), incyte ID No. 6100311CDI), as determined from a polynucleotide assembled e.g. from a lung adenocarcinoma cDNA library clone. The amino acid sequence shows homology, from a polynucleotides suggest that it may be an immunoglobulin. HIRP polynucleotides and polypeptides are useful for the diagnosis, creatment and prevention of cell proliferative disorders (e.g. cancers, arteriosclerosis, actinic keratosis, burstits, mixed connective tissue disease (MCTD), myelofibrosis, psoriasis, leukaemia, hepstitis, cirrhosis and atherosclerosis), and immunological disorders e.g. AIDS, Addison's disease, adult respiratory distress syndrome (ARDS), anaemia, asthma, autoimmune crown sisces actorphic gastritis, Goodpasture's syndrome, crown sisces, context dermatitis, diabetes mallitus, cholecystitis, crown tiple sclerosis, irritable bowel syndrome, osteoporosis, multiple sclerosis, irritable bowel syndrome, osteoporosis, hatterioris, diabetes mallitus, cholecystitis, crown tiple fungal, parasitic, protozoal and helminthic infections. The polypeptides are also used to screen for agonist and antagonist and atherapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel human immune response proteins, for treating immunological disorders and cell proliferative disorders, and for assessing the effects of exogenous compounds on the expression of HIRP molecules

protein is useful for preventing and treating disorders associated with altered levels of the protein such as cancer, immune system disorders
```

Claim 1; Page 85; 105pp; English.

The present sequence is the human immunoglobulin superfamily protein IGFAM-9. Its gene was isolated from a cDNA library of breast tumour tissue. It is expressed in reproductive, gastrointestinal and immune and haematopoletic tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many diseases, including cancer, immune system arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's disease, diabetes mellitus, emphysema, Graves disease, hepatitis, comultiple sclerosis, psoriasis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus and ulcerative colitis, compilcations of systemic lupus erythematosus and ulcerative colitis, compilcations of cancer, haemodialysis and extracorporeal circulation, trauma and chematopoietic cancer (such as leukaemia) and infections caused by compilcation, trauma and contexts.

Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases

Claim 11; SEQ ID No 2296; 2922pp; English.

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABD64131-ABD56305), and also concompasses polypeptides 104 identical and polynucleotides 954 identical to the sequences of the invention. The invention additionally relates to combinant vectors and host calls comprising human ovarian antigen of covarian antigen polynucleotides and polypeptides in diagnoshing, convarian antigen polynucleotides and polypeptides in diagnoshing, treating, prognosing or preventing various ovary and/or breast cancer, and disorders. Suck conditions include ovarian cancer and breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, copyloypetic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine shock syndrome), inflammatory conditions (e.g., maetitis, only multo disorders (e.g., chlamydia, HIV, toxoplasmosis, and toxic cyaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune ophoritis, spetemic lupus erythematosus), crepticatory disorders, neurological disorders, gastrointestinal disorders (e.g., anaemia), cardiovascular disorders only multipary system disorders (e.g., anaemia), cardiovascular disorders only multipare ovarian antigen polypeptides may compuned the compounds which curcher be used for gene therapy, chromosome mapping, in the conductor of individuals and in forensic analysis, and the cused in disease diagnosis, drug targeting and phenocyphing. The present cuseful in disease diagnosis, drug targeting and phenocyphing. The printed sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed compount of the printed compount of the printed of the printed compount of the printed compount of the printed compount of the printed of the printed compounts a human ovarian antigen of the printed compounts a human ovarian antigen of the printed compounts a human ovarian antigen of the printed compounts and the compounts and the compoun ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel human monoclonal antibodies. The antibodies can bind to human Tumour Growth Factor-beta (TGF-beta) II receptor, resulting in the inhibition of the signal transduction of human TGF-beta into cells. The antibodies can be used for the prevention and treatment of diseases associated with the production of TGF-beta, such as tissue fibrosis in the lung, liver, skin, kidney or other tissues, atherosclerosis, atopy, keloid and arthritis. The present sequence was used in the present invention.

The present sequence is the human immunoglobulin superfamily protein is IGFAM-10. Its gene was isolated from a cDNA library of colon tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many disease, including cancer, immune system atteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's arteriosclerosis, sporiasis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus and ulcerative colitis, complications of cancer, haemodialysis and extracorporeal circulation, trauma and haematopoietic cancer (such as leukaemia) and infections caused by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                             CG GFAM-1. Its gene was isolated from a cDNA library of synovial membrane tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many diseases, including cancer, immune system cd sorders (such as inflammation, AIDS, allergies, anaemia, arteriosclerosis, asthma, atherosclerosis, asthma, atherosclerosis, cholecystitis, crohn's comultiple sclerosis, asthma, atherosclerosis, cholecystitis, scleroderma, csystemic lupus erythematosus and ulcerative colitis), complications of cancer, haemodialysis and extracorporeal circulation, trauma and concer, haemotopoietic cancer (such as leukaemia) and infections caused by take become and viruses, fungi or parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           300

                                                    The variable region of the light chain is used in a recombinant protein with the variable region from the heavy chain of 3D6, the two V regions being joined by a linker. The recombinant protein binds to HIV gpl60. See also AAQ20066 and AAQ20068.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; immunoglobulin; IGFAM-13; IGFAM; immune disorder; cancer;

Its gene was isolated from a cDNA library of lung tumour tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many diseases, including cancer, immune system disorders (such as inflammation, AIDS, allergies anaemia, arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's disease, diabetes mellitus, emphysema, Graves' disease, hepatitis, multiple sclerosis, psoriasis, theumatoid arthritis, scleroderma, systemic lupus erythematosus and ulcerative colitis), complications of cancer, haemodialysis and extracorporeal circulation, trauma and hematopoletic cancer (such as leukaemia) and infections caused by

Shigella), fungi (e.g. Aspergillus, Blastomyces), parasites (e.g. Plasmodium, Trypanosoma, intestinal protozoa), cell proliferative disorders (e.g. actinic keratosis, arteriosclerosis, bursitis), and cancers (e.g. leukemia, melanoma, sarcoma). The peptides are also useful as immunogens for the development of antibodies that specifically recognizes these peptides. The polymucleotides may be used to detect and quantify gene expression in biopside tissues in which capression of IMOL may be correlated with the disease, as targets in a microarray, to detect differences in gene sequences among normal, carrier and affected individuals, and for screening libraries of compounds in drug screening techniques. Antibodies which specifically bid to IMOL may be used for the diagnosis of disorders characterized by expression of IMOL, or in assays to monitor patients being treated with IMOL or agonists, antagonists, or inhibitors of IMOL.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŝ
                                                                                                    The present invention describes a method (M1) for producing a human antibody phage display library (I), comprising: (1) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acide encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acide encoding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used to screen nucleic acide encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies display library using this method means there is no need to immunise thumans with antigens, and the difficulties faced with immortalising B cells are avoided. The present invention describes a method (M1) for producing a human antibody phage display library (I), comprising: (1) providing a nonhuman transpanic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acids encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used fenceding (III) which is displayed from the package. The method is used for producing a human antibody display library, e.g., a Fab phage display library. The display method may be used to screen nucleic acids encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies display library using this method means there is no need to immunise humans with antigens, and the difficulties faced with immortalising B cells are avoided. AMI30958 to AMI30066 and AMB74994 to AMB75056 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           247 AGGTTCAGCGGCAGTGGATCTGGGACAGATTTCACTCTCACCATCAGCAGCCTGCAGCCT 306
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producing a human antibody phage display library comprises providing a transgenic animal whose genome comprises human immunoglobulin genes and isolating nucleic acids encoding antibody chains from lymphatic cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21 IleThrCysArgAlaSerGlnGlyIleSerSerTrpLeuAlaTrpTyrGlnGlnLysPro
